**Bucket Tooth Bar**

Heavy duty tooth design with pre-drilled holes allowing bolting to your old bucket sides. It bolts tightly to the bucket sides as the cutting edge rides in a special, V-shaped pocket to help protect the bucket edge.

The tooth bar is specially heat-treated to ensure strength & durability. Teeth are built to pin on to the bar. They can be removed from the bar to re-sharpen or replace, which may increase your bucket's life.

The teeth are spaced 6" apart with cutting edge specs of 4 x 1/2 inches. This makes for optimal cutting & grasping power when tearing through earth.

Tooth Bar Specifications				
Part #				9010001
Description				TOOTH BAR
Tooth Spacing On Center				6"
Cutting Edge Size				4" by 0.5"
Cutting Edge Material				C1055
Adapters	Hardened heat treated with pin-on teeth.			
Mounting type	Bolts onto bucket sides/cutting edge rides in V-shaped pocket.			
Made in USA	Specifications are subject to change without notice.
