

# Skid-Steer Universal Plate

The universal attachment plate which welds in to place, has oval shaped openings that allows greater weld coverage, for a stronger weld spread between the universal attachment plate and your bucket.

Change out your buckets current mounting system to a more universal style, with the universal attachment plate.  
 ( bucket conversion )

The universal style attachment plate comes already spaced and squared. To do the conversion remove the old hook-up from your bucket and weld the new universal plate in it's place on the bucket.

Check your skid-steer manufacturer specifications before ordering.

<b>Universal Plate</b>	
Part #	9000172
Description	UP45 UNIVERSAL SINGLE PLATE
Inside Height	16"
Inside Width	44.5"
Overall Width	45"
Made in the U.S.A.	Specifications are subject to change without notice.
